

Consumers need to be given the ability to make a choice as to whether they use products containing GMO's. GMO's have not been shown to be safe. The large amounts of pesticides used on most GMO crops have been shown to be harmful to humans and our environment. We have been unable to ban these pesticides (2 4D and related) so we need to be able to choose not to consume crops on which they are used.

The GMO labeling law needs to be implemented now to follow VT's lead.
